

Measure Killer

external tool for Power BI

Use cases

- **Optimize Power BI semantic models to reduce storage and improve performance**
- **Document reports and datasets for increased data governance**
- **Scan entire Power BI and Fabric environment and see what has changed over time (new reports, workspaces, models etc.)**
- **Find security risks in your Power BI estate (user-based permissions, custom visuals)**
- **Identify models and reports that are draining your paid capacity (best practices, size, refresh schedules) -> lowers costs**
- **Increase your developer's efficiency by removing unused columns and measures**
- **Find out which part of your Analysis Services model is not used in any reports**
- **Get a full lineage of your data from data source down to a report's visual**
